## Report on Roundtable XV June 3-5 2009

Roundtable XV took place on June 3-5 2009, hosted by Oracle Corporation in Redwood Shores, California. The event was attended by 33 people from 20 members, plus a representative from the OASIS oBIX working group.

The CalConnect Interoperability Test Event (CITE) was held immediately prior to the Roundtable on June 1-3. Six organizations and 13 people participated in the regular test event, performing interoperability testing between their calendaring and scheduling implementations. A report on the CITE will be published as soon as information has been delivered from all participants.

The Roundtable was dedicated to technical committee sessions, and informal discussions and networking, with an all-hands Plenary meeting as the last item on Friday afternoon. The Technical Committee sessions were as usual organized sequentially, without competing parallel sessions, as is our standard practice to allow all attendees who wished to be involved in the discussions of each Technical Committee the opportunity to do so.

### SPECIAL EVENTS

A short (2 hour) workshop was held on Wednesday afternoon on Shared/Group/Public Calendars, and provided a unique opportunity for discussion of this key area of calendaring that many participants are interested in. The intent was to identify models and use cases for these types of calendars and calendaring, what technologies and standards are needed, and how to move forward. Work items will be picked up by TC USECASE and TC CALDAV to continue this effort.

### UPDATE ON TECHNICAL COMMITTEE WORK AND INITIATIVES

**TC CALDAV**: TC CALDAV provided a status update on the various IETF Internet Drafts relevant to CalDAV. The ZideOne Outlook to CalDAV connector was demonstrated. An open discussion was held on several projects for extensions to CalDAV which will be part of the TC's remit going forward.

**TC EVENTPUB**: TC EVENTPUB discussed the interactions between the TC and the shared calendar workshop discussions throughout much of the Roundtable, in particular public events use cases previously developed by the TC. The TC also discussed the state of work in its document describing how vCard can be used with iCalendar. A decision was made to put the TC on hold pending completion of vCard 4.0 work in the IETF, when it can be integrated into the EVENTPUB resource proposal.

**TC FREEBUSY**: TC FREEBUSY reviewed the publication of the [Freebusy Read URL](#) proposal and discussed work that has begun on a proposal for support of consensus scheduling.

**TC IOPTTEST**: TC IOPTTEST reported on the IOP test event just completed (elsewhere in this report) and on plans for an iCalendar parser and further use of the Virtual Test Lab Facility. The TC expects that testing will begin in October in new areas such as Freebusy Read URL, CardDAV, and the new Timezone service and registry proposals (the first two were tested informally this time; the Timezone protocols may begin informal testing in October).

**TC iSCHEDULE**: TC iSCHEDULE discussed the progress on the protocol and had an open discussion on methods of deploying the iSchedule protocol in various scenarios.

**TC MOBILE**: TC MOBILE discussed its work on a Vision for Mobile Calendar, and held an open discussion on the use cases for the document. An agreement was reached on the desirability of a proposed document describing how CalDAV could effectively be used by mobile devices. The Technical Committee is looking for a new Chair, following the reassignment of the previous Chair within his organization.

**TC RESOURCE**: TC RESOURCE was established after the last Roundtable and has begun work on defining a schema to represent resource attributes to enhance interoperability of resource data. A consensus was reached in the discussion to use an abstract schema a bit more complicated than name-value pairs, with an LDAP mapping example at the end of the document.

**TC TIMEZONE**: TC TIMEZONE presented work to date on its draft RFCs on Timezone Registry and Timezone Service. It seems likely that there will be at least three trial implementations available for interoperability testing at the October C.I.T.E.

**TC USECASE**: TC USECASE presented an overview of its three Resource documents which have just completed Last Call, and a vote to publish was taken at the TC Wrapup session at the end of Roundtable XV. The documents are published at:

- [State of Resource Interoperability for Calendaring, Groupware, and Project Management](#)
- [Use Cases for Resources V1.0](#)
- [A Recommendation for Minimum Interoperability of Resource Information](#)

The TC will begin work in three areas new areas:

- Use cases for non-institutional, non-enterprise calendar users.
- Use cases drawn from the Shared Calendar Workshop notes.
- A revision of the [Calendaring and Scheduling Glossary of Terms](#).

**TC XML**: The protocol for a round-trippable transform of iCalendar data to/from XML has been completed and approved for publication, and has been submitted to the IETF as an Internet Draft; see [iCalendar XML Representation](#). A visitor from the OASIS oBIX working group was present and discussed their interest in taking advantage of this work in the development of their WS calendar specification for intelligent building management. TX XML expects to begin next on a JSON document for the specification.

## **CALCONNECT INTEROPERABILITY TEST EVENT**

Participants in the IOP test included Apple, Microsoft, Oracle, PeopleCube, Rensselaer Polytechnic Institute (Bedework), and ZideOne. In addition to regular CalDAV, iMIP and iTIP testing, some informal CardDAV and Freebusy Read URL testing was done as well. Results from the event will be posted at [Past IOP Reports](#) as soon as they are collated and prepared.

## **FUTURE EVENTS**

**CALCONNECT XVI:** October 5-9, 2009, hosted by Apple in Cupertino, California

**CALCONNECT XVII:** February 1-5, 2010, hosted by the University of California, Irvine, in Irvine, California

The format of the CalConnect week is:

Monday morning through Wednesday noon, C.I.T.E. (CalConnect Interoperability Test Event)

Wednesday noon through Friday afternoon, Roundtable (presentations, TC sessions, BOFs, networking, Plenary).
